

Task Management App Project Guide

1. Requirements

To build a basic task management app, you will need:

- 1 Basic knowledge of HTML, CSS, and JavaScript
- 2 A code editor (e.g., VS Code)
- 3 A web browser (Chrome, Edge, Firefox)
- 4 Optional: GitHub for version control
- 5 Optional: Internet access for tutorials and documentation

2. Target

The goal of this project is to:

- 1 Build a functional task management application
- 2 Understand how frontend development works
- 3 Practice JavaScript DOM manipulation
- 4 Create a project suitable for a portfolio or YouTube content
- 5 Learn how to organize tasks digitally

3. Deliverables

At the end of the project, you should have:

- 1 A working task management web app
- 2 Ability to add, delete, and complete tasks
- 3 A clean and user-friendly interface
- 4 Saved tasks using local storage (optional)
- 5 A deployed version (optional, e.g., Vercel)

4. Steps to Build the App

- 1 Step 1: Plan features (add, delete, complete tasks)
- 2 Step 2: Create HTML structure (input, button, task list)
- 3 Step 3: Style with CSS for better UI
- 4 Step 4: Add JavaScript logic for interactivity
- 5 Step 5: Implement task completion and deletion

- 6 Step 6: Add local storage for saving tasks
- 7 Step 7: Test your application
- 8 Step 8: Deploy your app online

5. Tips

- 1 Start simple before adding advanced features
- 2 Test your code frequently
- 3 Break problems into small parts
- 4 Use `console.log()` to debug
- 5 Keep your code clean and organized

6. Recommendations

- 1 Upgrade to React for advanced UI
- 2 Add a backend (Node.js) for user accounts
- 3 Use a database like MongoDB
- 4 Add features like deadlines, reminders, and categories
- 5 Turn your project into a YouTube tutorial
